

# RECIRCULATING LOOP CHILLERS

TYPICAL CHILLER

## APPLICATIONS

Jacket Cooling	Computers
Lasers	Power Supplies
Induction Heaters	Vacuum Ovens
Machine Tools	Injection Molding
Welders	Plasma Spraying
MRI Equipment	Linear Accelerators
CAT Scans	Electron Microscopes

## FEATURES

### Energy Saving Design

Unlike most process chillers, compressor runs only as needed. Storage design provides close temperature control and safety from freeze-up without constant operation.

### Complete Temperature Control

Temperature adjustable within a range of 40° to 90°F [5° to 32°C] and will hold temperature within ±1.5°F [1°C] of setting. [ $\pm 0.5^{\circ}\text{F}$  optional]

### Welded Stainless Steel Cooling Tank

Recirculates clean coolant sealed from the atmosphere, eliminates bacterial build-up and internal corrosion.

### Uses HFC Refrigerant

Eliminates use of ozone-depleting refrigerant as per Montreal Protocol.

### Unlimited Options for Any Application

50+ options to meet any special need. See bulletin O & A.

### LIFETIME WARRANTY

Consult factory for details.

### ONE YEAR WARRANTY

All parts covered FOB jobsite for [12] months from start-up date or [15] months from date of shipment, whichever comes first. Consult factory for details.

### START-UP and FIRST YEAR SERVICE

Filtrine can arrange start-up and first year service on all parts and labor. Regular maintenance, to help prevent costly down-time, is available on a contractual basis. Consult factory for details.

### FIELD SERVICEABLE HERMETIC MODELS

#### DESCRIPTION

Recirculating chillers recirculate a clean coolant at constant temperature and pressure to increase the stability and consistency of water cooled machines and instruments. Air cooled chillers eliminate the use of tap water and prevent clogging and corrosion of small diameter heat exchangers due to rust and scale build-up.

• **PCP - Closed Loop Chillers:** Use a storage type cooling tank, with immersion coil evaporator, to provide close temperature control of recirculating coolants. The tank is sealed to prevent coolant evaporation and fouling, and supplied with a liquid level gauge, fill port and clean out. The pump recirculates coolant at constant pressure and flow, which is adjustable by turning a manual bypass valve.

• **POC - Open Loop Chillers:** Pump liquid from an open tank or sump, through the chiller and back to the sump. An adjustable thermostat senses the make up liquid temperature, cycling the chiller to insure constant temperature in the sump.
