**ONE-PASS CHILLER**

**MODEL** .......................................................... PC-3000S-330

**DESCRIPTION**
A completely packaged liquid chiller designed for applications where the liquid to be cooled passes through the chiller only once before either being added as an ingredient to a product or fouled by the product it is cooling. It is most important that a one-pass chiller be able to chill liquids at high and low flow rates without significant pressure drop or danger of freeze up, and yet have close, accurate temperature control.

Filtrine PC chillers are specifically designed for one-pass cooling. A high transfer immersion coil evaporator supplies maximum capacity at any flow rate with no pressure drop. Storage tank design permits close temperature control without short-cycling.

- Complete Temperature Control
- Temperature adjustable range of 40°F to 90°F [5°C to 32°C] and will hold temperature within ± 1.5°F [1°C] of setting.
- Welded Stainless Steel Cooling Tank
- Coolant sealed from the atmosphere, eliminates bacterial build-up and internal corrosion.
- Uses HFC Refrigerant
- Eliminates use of ozone-depleting refrigerant as per Montreal Protocol.
- Unlimited Options
- Design the perfect cooling system for any application. Over 50 options to meet almost any special need. Refer to Bulletin O & A.
