Exploded On-Wall Installation View FC-107-14

Typical Assembly Instructions (Always Install Per Local Code)

- Cut rough opening per install requirements (rough opening example shown above) for fountain connections.
- Cut a separate rough opening extending below the fountain mounting plate for chiller cabinet using rough in dimensions above and install blocking or fixture carriers as required to support the drinking fountain mounting plate and purifier cabinet in a minimum 11" deep wall.
- Fasten mounting plate over rough opening with 5/16" countersunk lag bolts with bottom of plate 27" above floor to meet ADA fountain height requirement of 34 1/4" to the bubbler spout.
- Install chiller cabinet in rough opening below the mounting plate and slide the cover plate over the mounting plate. Using screws, fasten the cabinet to the mounting surface through the side flange of the cabinet.
- Slide the fountain arms over the horizontal tongues protruding from the mounting plate and fasten with set screws pushing slightly against the cover plate.
- Install chiller into the cabinet, making sure the side with the electronic temperature controller is facing the door. Do not plug in chiller until Step 10 is completed and tank is full of water.
- Connect supply line to 1/4" FPT connection at stop valve at the purifier.
- Connect drain line to slip coupling unions. Use plumber's tape and crescent wrench to ensure all connections are tight. Connect drain trap per local code.
- Install filter cartridge in housing per instructions on filter.
- Activate bubbler with push button or sensor until all air in cooler tank and piping is purged out. If required, adjust flow regulator with screw driver per instructions in manual.
- Plug cooler into a 15 amp GFCI circuit after the tank and piping system are completely full of treated water.
