Filtrine's popular drinking water purification system, contained in a 16ga durable, long-lasting stainless steel housing includes an easy-to-change carbon block element. All the benefits of filtered water are available at any potable water outlet.

Select from either one of these elements to ensure your drinking water has a fresh taste:

For a higher level of filtration and removal of pathogens:

**0.5 MICRON CARBON BLOCK ELEMENT**

Meets NSF/ANSI Standards 42 and 53 for:

- Sediment particles down to 0.5 microns
- Organic taste and odor
- Chlorine taste and odor
- Pathogens including Cryptosporidium, Entamoeba Giardia and Toxoplasma

For standard water filtration:

**5.0 MICRON CARBON BLOCK ELEMENT**

Meets NSF/ANSI Standard 42 for removal of:

- Sediment particles down to 5.0 microns
- Organic taste and odor
- Chlorine taste and odor

**EXCLUSIVE "DUAL-SEAL" ELEMENT DESIGN**

Conventional cartridge-type filters depend upon compression of the cartridge top and bottom to effect a seal. When wet the average cartridge loses some rigidity, making it impossible to stop water from bypassing the element.

Filter and purifier elements do not rely on cartridge compression. Filtrine's exclusive "Dual-Seal" design ensures first-day effectiveness for the life of the element.

**PURIFIER INSTALLATION**

- Allow clear space under purifier to facilitate element change (see page 2)
- Water line temperature should be a maximum of 125 °F and a maximum pressure of 150 psi

**PURIFIER MAINTENANCE**

- Replace element every 4 months or more often if required
Taste Master® Point-of-Use Purifier Specifications

Typical Purifier (For other sizes see tables below)

Components

- Mounting Bolts
- Housing Top
- Housing Shell
- Drain Plug
- Threaded Collar

Housing

- Housing Top
- Housing Shell
- Drain Plug

Carbon Block Element

- Top Seal
- O-ring Seal
