Production Job Openings

Chiller Refrigeration Assembly/ Fabricator

Responsible for building the refrigeration system for process water chillers according to detailed specifications. The tasks involve configuring refrigeration systems, brazing and soldering copper and/or stainless steel materials. The size and complexity of the system will depend on the application specifications.

Qualifications

- Ability to fabricate and assemble structural and functional components of refrigeration system, using hand tools, power tools, brazing and soldering equipment including a torch
- Ability to read blueprints to determine location, size, capacity, and type of components needed to build refrigeration system
- Familiarity with soldering and brazing in a production environment
- Experience with refrigeration equipment and refrigerant handling best practices
- Ability to work in an unsupervised capacity
- Willingness to supervise and instruct others as needed

Salary

\$20.00 – \$36.00 per hour

Plumbing Assembly/ Fabricator

Involves soldering together the components of process water chillers. This includes the installation of components like pumps, tanks, copper or stainless steel piping and fittings within the chiller frame. The design and piping configuration is to match the application specifications.

Qualifications

- Ability to read and understand plumbing and piping diagrams
- Experience using basic hand and plumbing tools, and a torch
- Familiarity with soldering in a production environment
- Ability to work in an unsupervised capacity

Salary

\$18.00 – \$30.00 per hour
